Board layout availability: _____

Required information to issue *budgetary quotation:

Socket Information: _____ Package: _____
Tester Information and Pin Connection List: _____

*Orders will not be accepted against a budgetary quotation.

A sample socket is necessary to validate and test a new BIB Probe. It will be retained and incorporated by Global Interconnects Corporation into a test adapter, rendering it unusable for any other purpose. This will also serve to enable a shorter delivery cycle for repeat orders, as indicated below.

Delivery for new designs will be 3 weeks ARO (After Receipt of Order), or 1 week after receipt of a sample socket, whichever is later.

Delivery for a repeat order will be 2 weeks ARO, on condition that a sample socket is currently in the possession of Global Interconnects Corporation as a test adapter.

Probes are built to customer specifications; changes after time of order may affect deliver and pricing.

Expedite Delivery (1 week or less) may be available. Inquiries should be made directly to Global Interconnects Corp.

This product is RoHS compliant.
